       The invention relates to a new virus, designated H101.c33 or
       Sentinel Virus II (SVII). Isolated SVII viruses,
       polynucleotides and proteins from SVII viruses, and antibodies which
       bind SVII virus and SVII viral proteins are provided. The
       polynucleotides, proteins, and antibodies of the invention may be used
       to detect SVII virus or infection by SVII virus in a susceptible
       individual. Additionally, polynucleotides of the invention may be
       inserted into recombinant expression vectors for recombinant production
       of viral proteins.

WO 200142299 A UPAB: 20021007

NOVELTY - A composition (I), comprising isolated sentinel virus I (SVI) virus, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) an isolated polynucleotide (II) which:
- (a) selectively hybridizes with a 3847, 3844, 2499, 2499 or 2496 nucleotide SVI sequence (S1-S5), all fully defined in the specification;
  - (b) is complementary to (a);
  - (c) encodes an isolated SVI protein or its fragment; or
- (d) is complementary to an isolated polynucleotide encoding an isolated SVI protein or its fragment, the nucleotide sequence of (II) is distinct from the genomic sequences of TTV strains SANBAN and TUS01;
- (2) a composition comprising an isolated SVI protein or its fragment (III) which is serologically distinct from proteins of TTV strains SANBAN and TIS01;
  - (3) a vaccine composition comprising (III) and an excipient;
- (4) an expression vector comprising an isolated polynucleotide encoding an SVI protein or its fragment which is serologically distinct from proteins of TTV strains SANBAN and TUS01;
  - (5) an expression vector comprising an isolated polynucleotide, where

LARIO FAÜE BLANK (USPTO)

transcription of the isolated polynucleotide results in the production of an SVI antisense polynucleotide which is not an antisense polynucleotide that forms a duplex with an RNA transcript from TTV strains SANBAN and TUS01;

- (6) an isolated polyclonal or monoclonal antibody (IV) which binds (III); and
- (7) an antibody (V) that binds to an SVI virus whose genome contains (S1-S5).

ACTIVITY - Antiviral.

No biological data is given.

MECHANISM OF ACTION - Vaccine; antisense gene therapy.

USE - (II), (IV), (V) are useful for detecting SVI virus. The method involves contacting a sample with:

- (a) (IV) which binds (III) but does not bind TTV strains SANBAN and TUS01 or its proteins, and detecting (IV)-(I) complex; or
  - (b) (II) which selectively hybridizes to:
- (i) a SVI polynucleotide but does not selectively hybridize with polynucleotides of TTV strains SANBAN and TUS01; or
- (ii) a target polynucleotide of a viral genome which comprises(S1-S5), and detecting SVI virus by detecting hybridization of (II)-SVI polynucleotide or detecting hybridization of the probe with the target, respectively; or
- (iii) the SVI virus and detecting SVI virus by detecting SVI virus-(V) complexes.
- (All claimed). Probes and primers derived from SVI polynucleotide sequences which comprise a sequence of (S1)-(S5) is useful for identifying and isolating new variants of SVI. SVI polynucleotides are useful for detecting SVI virus, producing SVI polypeptides, constructing SVI-based expression/transduction vectors and as antisense oligonucleotides or for construction of antisense SVI vectors. Antisense SVI polynucleotides block expression of SVI proteins and/or SVI viral replication in SVI infected cells, and thus are useful for treating SVI infections. SVI polypeptides are useful in vaccines for preventing SVI infection and for treating SVI infection. (IV) or (V) is useful for detecting and/or identifying SVI virus and may also be useful for isolating viral particles and/or viral proteins.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 19, 2002 this sequence version replaced gi:23194910.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sneed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Tingya, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, Q., Wang, S., Warren, J., Warren, R., Wei, X., White, F., Williams, G., Willson, R., Wleczyk, R., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., Yu, F., Zhang, J., Zhou, J., Zhou, X., Zhao, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consists entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (19-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 232092) Rat Genome Sequencing Consortium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission
                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently

consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Rives, C., Rodkey, T., Rojas, A., Rose, M., Rose, R., Ruiz, S.J., Sanders, W., Savery, G., Scherer, S., Scott, G., Shatsman, S., Shen, H., Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Sneed, A., Sodergren, E., Song, X.-Z., Sorelle, R., Sosa, J., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Taylor, T., Thomas, N., Thomas, S., Tingey, A., Trejos, Z., Usmani, K., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, J., Wang, S., Warren, J., Warren, R., Wei, X., White, F., Wang, Q., Wang, S., Warren, W., Wooden, H., Worley, K., Wright, D., Wright, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., Yu, F., Zhang, J., Zhou, J., Zhou, J., Zhou, J., Zhou, J., Zhou, J., Zhou, J., Zhoo, S., Dunn, D., von Niederhausern, A., Weiss, R., Smith, D.R., Holt, R.A., Smith, H.O., Weinstock, G. and Gibbs, R.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        shotgun sequence only contigs will be indicated in the feature

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (18-APR-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least BX average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a phase death of the phase of the low-quality ends of sequence. with a Phrap-derived quality score. indicated

Sequencing vector: plasmid; n/a; 100% of reads
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 134458 bases at least Q40
Consensus quality: 134732 bases at least Q30
Consensus quality: 135037 bases at least Q20
Insert size: 134000; agarose-fp
Insert size: 134124; sum-of-contigs
Quality coverage: 9.87x in Q20 bases; agarose-fp
Quality coverage: 9.87x in Q20 bases; sum-of-contigs

Direct Submission

AL Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genotes, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23268777.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (24-OCT-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Sep 19, 2002 this sequence version replaced gi:21909215.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (29-MAY-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 279148)

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   consists of 24 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence, as soon as it is available and by the finished sequence, as soon as it is available.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NOTE: This is a 'working draft' sequence.

On May 10, 2003 this sequence version replaced gi:22855414.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome specifications will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (23-OCT-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 215119)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pasternak,S.,
                                                                                                                                                                                                                                                 NOTE: Estimated insert size may differ from sequence length
(see http://www.hsgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will

found in serum samples from chronic hapatitis patients, particularly hepatitis C virus patients and patients superinfected with more than one type of hepatitis virus. The invention provides SVII viruses polynucleotides, proteins, and antibodies which bind SVII virus and viral proteins. These can be used to detect SVII virus or infection by SVII virus, and the polynucleotides can be inserted into recombinant expression vectors for production of viral proteins. Vaccines for prevention and/or treatment of SVII infection are also provided. These may be protein- or DNA-based vaccines.
                                                                                                                                                                                                                 that is associated with cryptogenic, non-A/non-G hepatitis. The prototypic virus comprises a DNA genome of at least 371 bases. DNA clones comprising the genomic DNA were isolated using a modification of the representation different analysis (RDA) method in which serum from a cryptogenic hepatitis patient was used as the source of tester DNA. 3 Putative open reading frames were identified, 1 on the positive strand (P1) of the genomic DNA and 2 on the negative strand (M1 and M2). Conceptual translations of these ORFs are given in AAM50524-26. SVII was found at a high prevalence in serum from acute hepatitis patients, and was also found in common acute hepatitis patients.
                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the positive strand of a new hematitis virus, designated Sentinel virus II (SVII) or H101.c33,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A new virus associated with cryptogenic non-A/non-G hepatitis, designated Sentinel Virus II is useful to detect and treat Sentinel Virus II infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 2; Page 35; 20pp;

               SPERT is used to select novel polypeptides that bind the antibody of the epitope commonly recognised by the antisera from autoimmune mice which are the fl progeny of a cross of NZB and NZW parents (Portanova et al., J. Immunol. 144, 4633, 1990). The known epitope consists of ca. 10 amino acids at the N-terminus of the histone HZB protein. To make mRNA encoding candidate polypeptides a 5' fixed sequence composed of a T7 promoter sequence and a ribosome binding site which is recognised by both prokaryotic and eukaryotic ribosomes, terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating in a restriction endonuclease site is synthesised and colone terminating the synthesis of the synthesis and colone terminating in a restriction endonuclease site is synthesis and colone terminating the synthesis of the synthesis and colone terminating the synthesis and the synthesis 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   method of (SPERT).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (SPERT). The method provides a rapid way of isolating and identifying polypeptide ligands which bind to target mols. The polypeptide ligands can be used in e.g. assay methods, diagnostic procedures, cell sorting, as activators or inhibitors of target mol. function, as probes, as sequestering agents, drug delivery vehicles, modififers of hormone action and as catalysts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
```

The present sequence was used in an example illustrating an invention relating to a method for isolating a polypeptide ligand for a desired target molecule. The method involves synthesising a nucleic acid mixture comprising mRNA having translatable and non-translatable regions and a mixture of nucleic acid.polypeptide coppolymers, each comprising the mRNA and a polypeptide encoded by its associated mRNA. The copolymers are

diagnostic assays, of ribosome comple: affinity to the ta:

complexes or the target mo

target molecule

The method is termed systemic polypeptide evolution by reverse translation (SPERT). The polypeptides ligands of small molecule targets are useful in assay methods, diagnostic procedures, cell sorting, as inhibitors of target molecule function, as probes, as drug delivery vehicles and modifiers of hormone action and have therapeutic uses as sequestering agents. The target molecules include natural and synthetic polymers, including proteins, hormones, receptors and cell surfaces, nucleic acids and small molecules such as drugs, metabolites, cofactors and toxins. Polypeptide ligands are isolated and rapidly identified by this method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       T7 promoter; ribosome binding site; RBS; prokaryotic; eukaryotic; ribosome; mRNA.circle-solid.polypeptide copolymer; mRcs.pC; SPERT Systematic Polypeptide Evolution by Reverse Translation; assay; diagnosis; cell sorting; inhibitor; probe; sequestering agent;

cc amplified to create candidate mixtures enriched in ribosome complexes. CC or mRcs.pCs with an affinity to the target, are new. The methods are cc termed SPERT (Systematic Polypeptide Evolution by Reverse Translation). CC The SPERT methods are useful for isolating polypeptide ligands for cd desired target molecules. The polypeptide products are useful for assay methods, diagnostic procedures, cell sorting, as inhibitors of cassay methods, diagnostic procedures, cell sorting, as inhibitors of target molecule function, as probes, as sequestering agents and the clike. In addition, polypeptide products of the invention can have catalytic activity. Target molecules include natural and synthetic cyplymers, including proteins, polysaccharides, glycoproteins, hormones, cc. receptors and cell surfaces, nucleic acids, and small molecules such as cdrugs, metabolites, cofactors, transition state analogues and toxins. CC receptors and cell surfaces, nucleic acids, and small molecules such as coldings, metabolites, cofactors, transition state analogues and toxins. CC polypeptides having a randomized amino acid sequence. Each member of ce mixture is linked to an individualized mRNA, which encodes the camino acid sequence of that polypeptides are portionally of binding to a given desired ce ach mRNA encoding to their property of binding to a given desired contantely, both the desired optimal polypeptide is partitioned together with the means for further amplifying it by an in vitro process. CC ultimately, both the desired optimal polypeptide is partitioned together with the means for further amplifying it by an in vitro process. CC desired, and further amplification of the coding sequence. It is cherefore not necessary to analyse the amino acid sequence of the indexired polypeptide (using protein chemistry) in order to produce it in desired polypeptide (using protein chemistry) in order to produce it is passived manner ties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a restriction endonuclease site. The resulting nucleic acid was used the method of the invention for preparing ligands of target molecules in which mixtures of ribosome complexes or mRNA.circle_solid.polypept
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   to make mRNA encoding a candidate polypeptide, a 5' fixed sequence composed of a T7 promoter sequence and a ribosome binding site which recognised by both prokaryotic and eukaryotic ribosomes, terminating

In addition, KS is a common malignancy in HIV patients. KSHV persists in host cells in a latent form. One of the few genes expressed from the latent viral DNA is LANA, LANA associates with both human chromosomes and with the rhadino virus cis-acting element (RVCAE), thereby providing a tethering function: the KSHV DNA episome is "tied" to the host chromosomes. This allows the viral DNA to persist in the host cell. The present sequence may be used to screen and identify molecules that inhibit LANA interaction with RVCAE, thereby interfering with the latency cycle of this virus. Potential antiviral treatments for the both comparison of diseases may therefore he hadd on the first latency cycle of this virus. Potential antiviral treatments for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the Kaposi's sarcoma-associated herpesvirus, (KSHV) latency-associated nuclear antigen (LANA) gene. KSHV is also as Human Herpes Virus 8 (HHV8) and belongs to the rhadino virus, or gamma-2 herpes virus class. The LANA protein is necessary for the efficient persistence of rhadino virus DNA in mammalian cells. Persi

                                                                                                                                                                                                          Query Match
                                                                                                                                                 Matches
                                                                                                                                                                                                                               The invention provides a composition comprising nucleic acid, histone H1 protein and expression vector operationally encoding a protein suitable for tethering the nucleic acid to the histone H1 protein, where the ethering protein is LANA. The composition is useful in aiding the retention of the viral DNA in the host cell. The viral vector encodes a protein suitable for tethering DNA to Histone H1. Wethods for screening for compounds which are agonistic or antagonistic for the tethering of viral proteins to histone H1 and DNA binding sites are useful for developing the method of viral transfer. The composition has applications to gene therapy, including the treatment of multiple sclerosis, parkinson's disease, Huntington disease and diabetes. The present sequence represents the nucleotide sequence of the Kaposi's sarcoma associated herpesvirus (human herpesvirus 8) latency-associated nuclear antigen (LANA), which acts as a tethering protein.

                                                                                                                                                                         The present invention describes a system (A) for maintaining a plasmid as an episome in mammalian cells, comprising the rhadinoviral sequence LANA (latency-associated nuclear antigen) of 3489 base pairs (see ABA93487, S1) expressed in the cell, and the rhadinoviral sequence RVCAE (rhadinoviral cis-acting element) of 801 base pairs (see ABA93488, S2) present in the plasmid. Also describes is a method for maintaining a closed circular DNA in a cell by expressing (S1) in the cells and having (S2) as a cis-acting and maintenance sequence in the DNA. (A) is particularly used in gene therapy (or other gene transfer applications) that uses mammalian cells in which LANA is expressed. (A) improves persistence of gene therapy vectors in cells. The present sequence encodes Kaposi's sarcoma-associated herpesvirus (KSHV, also called human herpesvirus 8) LANA protein, which is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    KSHV terminal repeat; rhadino virus cis acting element; episom primary effusion lymphoma; latency-associated nuclear antigen; gene therapy; gene transfer; gene; ds.

                                                                   밁
                                                                                                                                    밁
                                                                                                                                                                       S
                                                                                                                                                                                                                                                                              encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded by it, and antibodies (Ab) specific for the proteins are useful for detecting HHV8, specifically for diagnosis of Kaposi's sarcoma, in body fluids or tissue samples. HHV8 infections can be treated with antisense or triplex forming molecules or agents that bind specifically to the protein. Ab may be used for prophylaxis or treatment of HHV8 infection, while the protein can be used in protective vaccines. Ab may also be used to differentiate between lymphomas, and HHV8 may be implicated in many cother lymphoproliferative diseases such as lymphomas, leukaemia, containing and mycosis fungoides. Cells and animals containing the nucleic acid are useful for drug screening. HHV8-derived peptides can be used as targets for antiviral drugs, e.g. dihydrofolate reductase gene can be inhibited with methorreate. These can also be used to determine the inmune status of a patient infected with HV. HHV8 derived protein coviral MIP III may be used as an anti-inflammatory agent for, e.g. treating rhemmatoid arthritis. This sequence is stated as containing
                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                             Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-NOV-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the long unique region and terminal repeat of the Kaposi's sarcoma-associated herpes virus (KSHV). KSHV is also known as human herpes virus 8 (HHV8). This sequence contains the DNAs of the invention which encode KSHV polypeptides selected from: (a) viral macrophage inflammatory protein (MID II; (b) viral interleukin-6 (IL-6); (c) viral IRF 1; (d) complement-binding protein; glycoproteins B, M or L; (d) capsid protein IV encoded by ORF65; and (e) immediate early protein encoded by ORF73. Labelled probes for the nucleic acid, proteins encoded

                                                                                                                                                                                                                                                                                                           AAV64950-V64972 are sequences used in a method for the production of a polypeptide ligand of a target molecule. The polypeptide products can be used in assays, in diagnostic procedures, in cell sorting, as inhibitors of target molecule function, as probes, as sequestering agents, or may have catalytic activity.
